Simpla Admin

Flexible & User Friendly Admin/CMS Template

Thank you for purchasing Simpla Admin. Please read through this documentation before using the template.

Files

The best way to learn how everything works is to explore the files. I've written plenty of comments in them so it should be pretty easy to understand.

HTML

- **index.html** (the main page with everything in it)
- **login.html** (the login page)

CSS

- **reset.css** (Eric Meyer's reset stylesheet)
- **style.css** (the main stylesheet for elements and classes in the template)
- **invalid.css** (styles that are not valid CSS. It adds rounded corners to some elements and some opacity. Remove if you want the CSS completely valid)
- **ie.css** (Fixes for stupid Internet Explorer)
- **blue.css** and **red.css** (stylesheets for changing colour scheme. Open the index.html for instructions in. New colour schemes can easily be created with the included .psd-file)

Javascript

- **DD_belatedPNG_0.0.7a.js** (DD_belatedPNG by Drew Miller for making .png transparency available in Internet Explorer 6)
- **jquery-1.3.2.min.js** (the jQuery javascript library)
- **facebox.js** (jQuery plugin for making modal windows)
- **jquery.wysiwyg.js** (jQuery plugin for the WYSIWYG editor)
- **simpla.jquery.configuration.js** (this file contains all the jquery functions available in the template. Scroll down and you'll find a guide for some of these functions under "jQuery functions")

Layout

Columns

You can easily divide the content in columns. Just give a block element (a `div`, `fieldset` etc.) the class "`column-left`" for a left-aligned column, or "`column-right`" for a right-aligned column. The columns resize to fit the user's window size, so you don't have to worry about that.

Don't forget to clear the floats if you have two columns side-by-side. That's done by inserting this after the two columns:

```
<div class="clear"></div>
```

This can of course be inserted anywhere you want to clear the floats.

Content box

The Content box is very flexible. You can put anything in it and even put two Content boxes in columns beside each other. You do that in the same way I explained above: just add the class "`column-left`" to a Content box to left-align it or "`column-right`" to right-align it. You can see an example of this in index.html. If you want a Content box to be closed by default, just add the class "`closed-box`" to a Content box (see the right-aligned box in index.html)

Misc.

Give anything the class `align-left` or `align-right` to float them left or right.

jQuery functions

Open the **simpla.jquery.configuration.js** file and read on (everything in the file is not covered here, only the things that need some explaining. There are notes in the files for everything though)

Content box tabs

Every tab corresponds to a div in "`content-box-content`", so the tab's href must match the id of its corresponding div. This id must be unique for every page. Check out the index.html and you will see how it's built. Also, the tab you want to be open on default must have the class "`default-tab`" on both the tab and the tab's content.

Close button

If you add the class "`close`" to an element, it will close its parent when you click it. Mainly used for closing notifications.

Facebox

Simpla Admin uses Facebox jQuery plugin to create modal boxes. Add attribute `rel="modal"` to a link to open a modal. Here are some code samples:

Open the image 'image.jpg' in modal:
```
<a href="image.jpg" rel="modal">Open image</a>
```

Open the div with id 'some-div' in modal:
```
<a href="#some-div" rel="modal">Open div</a>
```

View the page 'page.html' in modal:
```
<a href="page.html" rel="modal">Open page</a>
```

Read more about Facebox at **http://famspam.com/facebox.**

jQuery WYSIWYG

Just give a textarea the class "`wysiwyg`" to make it a WYSIWYG editor.

Read more about jQuery WYSIWYG at **http://code.google.com/p/jwysiwyg/**

That's it

Once again, thanks for puchasing the template. I hope you find it useful. Don't hesitate to contact me if you have any questions. Email via my themeforest page is prefered.
